PARK USER STATISTICS 1984

INTRODUCTION

Alberta Recreation and Parks is pleased to forward for your use the Eighth Annual User Statistics Report. This report presents the information collected in the field by Operations staff in a format considered to be easily comprehensible and useful. With the changes in User Statistics 1984, this presentation has again moved closer to meeting the needs of report users. Regional summary tables and graphs have again been included with each region section, and the provincial summary table and graph can be found in Appendix I.

Some of the problems present in past user statistic reports involving day use figures have been minimized this year through a day use study carried out by Alberta Recreation and Parks field staff. This study involved 39 Provincial Parks throughout the province. Data was collected to obtain calibration factors for day use. Calibration factors for the traffic counters, the number of day use vehicles and party size were obtained for each of the 39 parks to enable adjustments of the traffic counts to a reasonably accurate number of day users. These parks are listed in Appendix VII and in the table of contents for each region. Further details on these studies can be obtained from Barry Bentham, Operations and Maintenance Division, Alberta Recreation and Parks. Day use figures in the remaining parks must still be regarded as merely estimates due to a number of unknown or uncontrollable factors involved in their collection. (See Appendix VII).

Some of the problems in data collection from Self Registration parks have been controlled. A study similar to the day use study was conducted in all those parks listed as self registration. These parks are listed in Appendix VIII and in the Table of Contents for each region. Further details on this study can be obtained from Barry Bentham, Operations and Maintenance Division, Alberta Recreation and Parks.

The co-ordination, design and preparation of this report was carried out by I.D. Systems Ltd. of Edmonton, Alberta. Data collection was carried out by the field staff in the parks. Steve Amos, Systems Development Branch, Alberta Recreation and Parks implemented the computer programs and Rod Keith of Alberta Recreation and Parks served as Project Manager. Any comments concerning the compilation, analysis and presentation format of the statistics are welcomed by Alberta Recreation and Parks, Program Development Branch.

FORMAT

The format for individual Provincial Park Statistics concerning camping and day use during the summer season remains the same as that of last year. The handbook is alphabetically organized by region and, within each region, alphabetically by parks. The camping and day use parks are followed by day use only parks. Multiple campground parks are presented with the table and graph for the total park shown first, followed by separate tables and graphs for each campground within the park. Data for individual Recreational Areas and new campgrounds in Kananaskis Country are shown in tabular and graph form as well. Interpretive statistics for a number of parks are located on data format sheets at the end of each regional section. Definitions can be found in the Glossary of Interpretive Terms and in Appendix VII. Appendix VII entitled "Inaccuracies and Problems Occurring in Attendance Form Data" and Appendix VIII entitled, "Problems in Self Registration Data", have again been included because these problems are still occurring to some extent. Appendix IX, entitled "Endnotes" has been included this year and encompasses a variety of smaller problems found throughout the data and the technique used to compensate or explain each situation. Where a single digit number between 1 and 9 is shown throughout the book under a heading on a table or the regional table of contents by a park name the explanation will be in this Appendix under the corresponding number.

Appendix X entitled, "Additional Data" lists camping and day use data received from parks too late to be run in the main frame program. Revised regional and provincial totals are included.

The last change in this year's edition is the deletion of camping equipment used from all the tables. The collection of this information no longer fills a useful purpose and by eliminating this data we hope to have streamlined the book and the data collection process.

When using Alberta Provincial Parks User Statistics 1984, some points should be noted. These include:

1. if a Park is a self registration park, was under day use study or was closed for some reason, this will be stated in the table of contents at the beginning of each region;
2. a rounding factor has been designed into the computer program and therefore percentages may not equal one hundred percent when added;
3. data may have been incomplete on the Monthly Park Attendance Report and therefore totals may be underestimated (these are more fully explained in the Appendices); and
4. day use statistics not included under the 1984 Day Use Study project continue to reflect large inaccuracies in data collection procedures and must be considered as estimates.

GLOSSARY OF TERMS

Campground Capacity	Number of camping sites available for use during the 1984 summer season.	
Individual Camper Night (Camper Day)	The passing of one night, in the park, by one camper.	
Camping Party	A single person or group of persons, usually travelling in the same vehicle, occupying one campsite.	
Camping Party Night	One campsite occupied by one camping party for one overnight stay.	
Peak Night(s)	Night(s) of highest campground occupancy during the summer season.	
Day User Day	One person making a recreational visit to a park for one day or portion of one day without staying overnight.	
Camping Equipment	Tent	A movable shelter of cloth, usually canvas, or nylon, supported by pole(s) and guy ropes.
	Tent-Trailer	A canvas or other folding structure, mounted on wheels, and designed for travel, recreation and vacation use.
	Trailer	A vehicular, portable structure, built on a chassis, designed as a temporary dwelling, to be pulled behind a motor vehicle for travel, recreation and vacation.
	Truck-camper	A truck which has a shelter structure or after-cabin attached or separately mounted on its box deck or chassis, to form a single unit for purposes of travel, recreation and vacation. The after-cabin usually contains sleeping and cooking facilities and may or may not contain sanitary facilities (includes vans, motor homes, etc.).
Non-Recreation Vehicles	Vehicles entering the park for purposes other than recreation, including service, commercial, construction and park vehicles.	
Weekend Night	A normal weekend includes both Friday and Saturday nights. A long weekend includes Friday night, Saturday night and Sunday night.	
Weekday Night	Includes Sunday night to Thursday night. However, when a long weekend occurs, Sunday night is included as part of the long weekend.	

GLOSSARY OF SYMBOLS

X - Statistics Not Available
TTR - Tent-Trailer
TRLR - Trailer
TKCP - Truck-Camper

HOW USER STATISTICS ARE CALCULATED

Campground Capacity	- Figures as provided by Alberta Recreation and Parks, March 1984.
Vehicles, Total	- Total number of vehicles entering the park (from Park Monthly Attendance Reports).
Vehicles, Non-Recreational	- Total number of vehicles entering the park on weekdays and weekends for purposes other than recreation, including service vehicles, park patrol and R.C.M.P. (based on estimates calculated from sample counts of vehicles entering the park).
Vehicles, Camping	- Total number of vehicles entering the park on weekdays and weekends for the purpose of camping overnight (based on number of camping permits sold each day).
Vehicles, Day Use	- Total number of vehicles entering the park on weekdays and weekends for day use only, is based on: (Total number of vehicles entering the park) - (Number of Non-Recreation vehicles + Number of Camping vehicles).
Number of Day User Days	- Total number of people using the park during the day only (based on sample counts of estimated number of Day Users per vehicle x number of Day Use vehicles).
Average Day User Days	- Total number of people using the park during the day only (based on sample counts of estimated number of Day Users per vehicle x number of Day Use vehicles).
Average Day Use Party Size	- $\frac{\text{Number of Day User Days}}{\text{Number of Day Use Vehicles}}$
Number of Camping Party Nights	- Number of Tents + Tent-Trailers + Trailers + Truck-Campers.
Percent Capacity	- $\frac{\text{Number of camping parties in park on a given night}}{\text{Campground capacity}} \times 100$

Average Daily Occupancy, Weekdays - $\frac{\text{Total camping parties on weekdays}}{\text{Campground capacity x number of weekday nights}} \times 100$

Average Daily Occupancy, Weekends - $\frac{\text{Total camping parties on weekends}}{\text{Campground capacity x number of weekend nights}} \times 100$

Number of Individual Camper Nights (Camper days) - Total number of individual people camping in the park (from monthly Park Attendance Reports)

Average Camping Party Size - $\frac{\text{Number of Individual Camper Nights}}{\text{Number of Camping Party Nights}}$

Camping Equipment Used - % Tents $\frac{\text{Number of Tents}}{\text{Number of Camping Party Nights}} \times 100$

% Tent-Trailers $\frac{\text{Number of Tent-Trailers}}{\text{Number of Camping Party Nights}} \times 100$

% Trailers $\frac{\text{Number of Trailers}}{\text{Number of Camping Party Nights}} \times 100$

% Truck-Campers $\frac{\text{Number of Truck-Campers}}{\text{Number of Camping Party Nights}} \times 100$

Average % Camping Occupancy (Summer season: May 15 - September 15) - $\frac{\text{Total Camping Party Nights for the Summer Season}}{\text{Campground Capacity x Total Number of Nights}} \times 100$

GLOSSARY OF INTERPRETIVE TERMS

Amphitheatre:	Formal presentation, which usually involves the use of audio-visual materials, conducted by park naturalist in an amphitheatre structure.
Auto Tour:	Conducted tour by automobile or bus, in which park naturalist conveys information to visitors as a group.
Campfire/On-Site Presentation:	Small, informal evening program, which may involve interpretive talks, skits, musical events, etc., conducted by park naturalist near campground area.
Children's Event:	Special programs designed specifically for children under the age of twelve.
Environmental Education:	Contact with organized groups participating in approved environmental education activities in a designated centre.
Environmental Education Workshop:	Organized program which demonstrates field procedures, activities, or park policies to teachers.
Extension Program:	Park personnel contact with the public outside of the park setting in which information about park and/or activities is presented.
Guided Hike:	A regularly scheduled walk conducted by a park naturalist over an established route or area.
Guided Schools:	Contact made by way of interpretive information being provided to organized school groups in the park setting.
Mass Media:	Message communicated by way of TV, radio or newspaper.
On-Site Exhibit:	Display or exhibit on the actual site presenting information on a natural, cultural or historic topic.
Preserve Hike:	Similar to guided hike except that the route of this walk takes the visitor through special preserve areas accessible to the public only under supervision of park personnel.

Publications:	Pamphlets, brochures, maps or notices distributed by park staff to convey interpretive or general park information.
Roving Point Duty:	Casual contacts made by park naturalist when walking through campground area and answering visitors'questions.
Self-Guided Trail:	Well-marked hiking trail where visitors follow a series of signs which present some unified aspect of the natural surroundings.
Special Event:	A non-regularly scheduled program or activity presented by a park naturalist usually involving a temporary natural occurrence (i.e. summer equinox, fall colours or tadpole hatching).
Visitor Centre:	A building or group of buildings where information, orientation, and/or interpretation is provided for visitors.
Wayside Sign:	Sign/display panel situtated within easy access of vehicles travelling along a roadway.

APPENDIX VII

Inaccuracies and Problems Occurring in Data

APPENDIX VII

INACCURACIES AND PROBLEMS OCCURRING IN DATA

Counter Readings. A major problem in this area is that traffic counters are often not working or work erratically and do not provide accurate numbers. Park staff generally are aware of this situation and therefore use other methods to calculate vehicle traffic but in some instances these numbers are recorded and the inaccuracies are reflected throughout the rest of the figures - especially total vehicle counts and day use vehicle counts.

Another problem occurs in the placement of the counter on the road. If the counter is across the entrance only, values are entered directly from the counter reading. If, however, a counter is across the entire width of the road it counts traffic entering and leaving and must be divided by two. Park staff may be unaware of the counter placement or do not note it on the form, therefore, the total value from the traffic counter is entered, resulting in readings that are twice the value they should be.

The last problem with counter readings is that any type of counter fails to take account of vehicles with more than two axles (such as a car pulling a tent-trailer or trailer) which will click the counter to higher figures.

These generally high counter readings result in high total vehicle readings which more often than not are shifted to the day use vehicle column in order to make column figures balance. For example, if the counter reading at the start of the day was 210 and the reading at the end of the day was 350, this indicates that 140 vehicles entered the park throughout the day. When non-recreational vehicle totals and camping vehicle totals are subtracted from 140, the resultant figure is theoretically the day-use vehicle total.

Example:	Counter Reading indicates	Total Vehicles	Non-Recreational	Camping Vehicles	Day-Use Vehicles
	140	140	10	35	95

140 - 10 - 35 = 95

It is easy to see therefore, how any of the above three problems will create large inaccuracies in both total vehicle numbers and day use vehicle numbers.

Non-recreational Vehicles. These are vehicles entering a park for purposes other than recreation in the park. They include commercial, construction, cottagers or park service vehicles. If there is a counter on the road these vehicles add to the total vehicle number. Many parks do not fill in this column and therefore these vehicles will end up being counted as day use vehicles. This results in inaccurate day use figures. It would be better for the staff to make an estimate based on a visual count for the first full week of each month and use these figures throughout the month. (See Provincial Parks Attendance Report Completion Guide).

Number of Camper Nights. This figure indicates the total number of people camping in the park each night. In parks where there is an entry gate with staff registering each camper the number is filled in by the park attendant.

There appears to be confusion in some parks regarding how this figure is tabulated. Instead of tallying the total number of campers in the park each night several parks are using a multiplier (generally 3) and multiplying the number of camping vehicles in the park each night by the number to give a rough estimate of the number of camper nights. They are assuming that each and every camping party has three (3) people in it.

Number of Camping Vehicles. The assumption behind this figure is that once the camping vehicle enters the park to stay overnight for however long, it does not continue entering and leaving the park. This number is equal to the number of camping permits sold each day. It does not include the previous days sales. It appears from the data sheets that this figure is being calculated incorrectly in most parks. Most parks are entering the total number of camping vehicles in the park each night and not the number of camping permits sold each day. This leads to inaccuracies in the camping vehicle column as well as the day use column.

The confusion is understandable as many campers buy permits for more than one night's stay and it would seem to make sense that a camping vehicle in the park for three days would be recorded as three consecutive days and not just one (on the day it was bought).

Hopefully, the following example will clear up the confusion.

Example:

Day 1: Two vehicles come into the park - one is a day use party who leaves the park again in the evening. The other vehicle is a camping party of three who purchase a permit for two nights.

Day 2: Four new vehicles enter the park - three are day-use parties who leave the same evening. The fourth vehicle is a camping party of four who purchase a camping permit for one night.

*Keep in mind that Total Vehicles = Non-Rec. + Camping Vehicles + Day Use Vehicles.

Figure 1. Properly recorded

Day	Total Vehicles	Non-Rec.	Camping Vehicles	Camper Nights	T	TT	T	TC	Day Use Vehicle
1	2	0	1	3			1		1
2	4	0	1	7				1	3

Figure 2. Improperly recorded

Day	Total Vehicles	Non-Rec.	Camping Vehicles	Camper Nights	T	TT	T	TC	Day Use Vehicle
1	2	0	1	3			1		1
2	4	0	2	7				1	2

Note that on Figure 2, by tallying the total number of camping vehicles as two instead of one (the number of permits sold that day) the camping vehicle total is inaccurate (high by one) and the day use figure is inaccurate (it should be 3).

Number of Day User Vehicles. This figure is generally inaccurate in all parks that have a day use area or areas except for those thirty-nine parks that were studied in 1984. The parks under day use study in 1984 were:

East Central Region - Big Knife, Cold Lake, Dillberry Lake, Gooseberry Lake, Gregoire Lake, Sir Winston Churchill, Vermillion, and Whitney Lakes.

Northern Region - Carson Pegasus, Hilliard's Bay, Moonshine Lake, Queen Elizabeth, Saskatoon Island, Williamson, Winagami, Young's Point, and O'Brien

Southern Region - Beauvais Lake, Chain Lakes, Dinosaur, Kinbrook Island, Little Bow, Park Lake, Police Outpost, Taber, Tillebrook, Willow Creek, Woolford, Writing-on-Stone, and Wyndham-Carseland.

West Central Region - Aspen Beach, Ma-Me-O Beach, Pembina River, Pigeon Lake, Red Lodge, Thunder Lake, and Wabamun Lake.

Generally day use figures are inflated due to errors in counter readings. Since vehicle figures are balanced to the total number of vehicles by adjusting the number of day user vehicles, these numbers must be regarded as estimates.

Number of Day User Days. This figure refers to the number of day users in the park and is derived by using a multiplier representing the average number of day users per vehicle determined by the park staff and multiplying it by the total number of day user vehicles.

The biggest problem in this area is that some parks do not appear to do the proper sampling procedure required to get an accurate multiplier figure. Some parks have used the same number, usually 3 or 4, consistently for the past three years. This problem can be eliminated by following the procedure outlined in the Provincial Parks Attendance Report Completion Guide.

The inaccurate multipliers create inaccuracies in the number of day user days, usually it represents an overestimate.

APPENDIX VIII

Problems in Data Regarding Self Registration Parks

PROBLEMS IN DATA REGARDING SELF REGISTRATION PARKS

In 1984 there were 18 self registration parks in the Alberta Provincial Parks system. These parks were: Beauvais Lake, Bragg Creek, Calling Lake, Chain Lakes, Cypress Hills-Reesor Campground, Hilliard's Bay, Kananaskis Provincial Park, Moonshine Lake, Moose Lake, Pembina River, Queen Elizabeth, Taber, Thunder Lake, Tillebrook, William A. Switzer, Williamson, Winagami Lake and Wyndham-Carseland. In addition, all of the Recreation Areas in Kananaskis were self registration.

In a self registration park the camper registers the camping party from a self-serve permit dispenser. Thus, the onus is upon the campers to register themselves and they may or may not do so. A check is usually made by park staff at a prearranged time and campers who have not registered are asked to do so. Inevitably, in a system such as this, campers may be missed in the rounds or the campers may ignore the reminder to register. The persistence of the park staff in obtaining compliance from campers to register has a great deal to do with the accuracy of statistics from these parks. Evaluation of statistics from parks using self registration do, however, indicate a high level of compliance.

Another problem in obtaining statistics from these parks is in the form of the permit which the camper fills out to register. The permit does not require information such as the number of people in the camping party which provides the number of individual camper nights. Instead this number must be estimated by park staff. They may use a multiplier representing the average number of people in a camping party derived from a visual sample and multiply it by the number of camping vehicles in the park, or may attempt to count the number of people at each campsite. Either method has severe disadvantages in terms of accuracy. It is therefore recommended that permits be redesigned to allow recording of this information.

As well, the permits do not provide space to write down the type of camping equipment used and field staff must try to estimate or visually count this statistic.

The same problems that exist in other parks that are not on the self registration system with regards to day use statistics occur in these parks. However, it is probable that day use statistics may be even more inaccurate because there are fewer staff (if any) stationed at the park to make visual counts or estimates.

APPENDIX IX

Endnotes

ENDNOTES

(1) Whitney Lake campground closed in August and converted to day use. Ross Lake campground opened in August with 149 sites. Changes to be reflected in 1985 Parks User Statistics Handbook.

(1a) Twin Lakes Campground in Crimson Lake Provincial Park was closed in 1984 for construction.

(2) Average Day Use Party Size - Figures shown in handbook are based on the Day Use Study Collection Program. See Appendix VII.

(3) Self registration park that has a reporting history of only one (1) or two (2) years but not three (3) year minimum needed for computer derived calculations(s).

(4) Self registration park that has not been reported previously therefore the three (3) year history of data from which average party size can be derived is lacking. Lack of historical data causes mainframe computer to calculate zero (0.00) as average party size.

(5) Self registration park with a three (3) year data history. Average party size for camping statistics was calculated for each month based on the average party size per month from the 1983, 1982 and 1981 Parks User Statistics Handbook. These figures must be treated as estimates due to the inaccuracies resulting from averaging averages.

(6) At the request of Alberta Recreation and Parks, Design and Implementation Division, the original data has been adjusted. The figures shown here are an ESTIMATE based on the mean of the monthly average from 1982 and 1983 Handbooks. Care should be taken in the use of these figures because of the inaccuracies inherent in averaging averages.

The reason for utilizing an average based on two preceeding years is because of the negative skewing effect caused by the number of self registration parks being reported for the first time. The data from these parks is entered in the mainframe computer as zero (0) which then generates a lower average party size for the provincial summary than would be the case if data was not entered for these parks at all.

APPENDIX X

Additional Data

ADDITIONAL DATA

The September data for Cypress Hills - Elkwater and Firerock campgrounds - was submitted too late to be run in the main computer program. The revised totals, as shown below, will provide a more accurate overview of day use and camping use for this park.

	Total Vehicles	Non Rec Vehicles	Camping Vehicles	Individual Camping Nights	Camping Party Nights	Day Use Vehicles	Day Use Days	Average Day Use Party Size
